# Daivik Chawla

daivikchawla001@gmail.com · daivik.mysterystudios.xyz · linkedin.com/in/daivikchawla · fiverr.com/daivikchawla · github.com/DaivikChawla

First year, B.E. Computer Science,
Thapar Institute of Engineering & Technology,
Patiala

I run a freelance dev studio with 100+ five-star reviews, I co-founded a web studio, and I fund my own expenses. Now I want to build with a team.

## PROOF

**5.0 ★**
from 100+ client reviews

**Level 2**
Fiverr seller since 2023

**2023**
freelancing since

**2**
businesses running right now

## WORK

### **MysteryStudios** — my freelance dev studio

Founder · 2023 → now

**I build and launch multiplayer game servers for clients around the world.**

MysteryStudios is where most of my income comes from. Clients bring me an idea for a game server, and I hand back something ready to launch: the gameplay systems, custom features, menus, in-game economy and the online store that makes it money. Most of my clients find me on Fiverr, where I'm a Level 2 seller with a 5.0 rating across more than a hundred reviews, from clients in the US, the UK and Europe.

For a long time I built every server by hand, piece by piece. Once I learned to work with AI tools, I automated most of that process, so work that used to eat my days now takes a fraction of the time.

Running it taught me the parts of building that school doesn't: scoping work with a client, quoting a price, hitting deadlines, and fixing things when they break the night before launch.

### **pagewalla** — websites for local businesses

Co-founder

**Websites for businesses that only exist on Instagram.**

Plenty of good local businesses — clinics, salons, gyms — have a great Instagram and no website, so they don't show up when someone searches Google. pagewalla builds them a proper site in about a week. We've already built one for Shri Raam Engineering, a crane engineering company in Gurugram.

I've made the cold calls myself, and the ones that ended in "no thanks" taught me more about selling than anything else this year.

### **Vesper** — an AI assistant running on my own subscription

Side project · macOS

**An AI assistant that lives on my screen and talks back.**

I found Clicky, an open-source AI screen companion, and made my own version of it. The main thing I changed: instead of paying for API usage, Vesper runs on my existing Claude subscription. I also gave it a personality. It's blunt, a little sarcastic, and tells me when I'm wrong.

*Based on the open-source Clicky project.*

## HOW I BUILD

I don't write most of my code by hand. I direct AI agents that do: I decide what to build, write the brief, check what comes back, and push it until it's right. That's how a first-year ships things that would normally need a whole team.

I'm learning the fundamentals properly too, which is why I'm doing Harvard's CS50 on the side, on top of college.

## TOOLKIT

| | |
|---|---|
| **Building with AI** | Claude Code, Claude Design, agent skills and subagents, MCP tools, briefing and directing agents |
| **Code** | C (college), CS50 |
| **Business** | 100+ five-star reviews on Fiverr, clients in the US, the UK and Europe, scoping and quoting projects, cold calls and selling |

## A BIT ABOUT ME

– I started freelancing in school. Since then I've earned around ₹12 lakh, and these days I pay my own expenses.
– I invest in the stock market.
– I read about new tech the way some people follow cricket.
